Abstract (en)

[origin: EP0874106A2] The separating element has a gap rail which can be fixed to two building elements which are spaced from one another. A reinforcing element (6,6') is arranged on at least one side wall (4,5) of an insulating strip (3) on the rail. Each side wall of the strip is connected to a flat bar (7,7'), and the reinforcing element has at least two elongated holes (12) which are spaced from one another, and which allow adjustment of its level and-or slope. Fixing elements (8,8') extend through the holes in order to connect with the flat bars.
