Abstract (en)
[origin: EP0874112A2] On the head side of the angle parts is located a cover plate which has a through passage corresponding to the cross-section of the fence stake. The arms of the angle parts on the head side have central cut-outs. The longitudinal edges (9) of the cut-outs (8) are inclined against the axis of the ground spike in the direction of the point. They hold a conical tube section (10) to accommodate the fence stake. The tube section may be formed as a slotted tube with a welding seam (12) in the area of the slot (11). The fence stake has a circular cross-section and a groove together with a slot.
