Abstract (en)

[origin: WO9807627A1] This invention concerns a device for receiving tubular packaging films, with a tubular base (1) in conical form which has at its one axial end (3) an external diameter (d) which is less than the diameter (F) of the packaging film (2) to be received, such that the packaging film (2) can be pushed from this end (3) over the base (1) in folded form. At its other axial end (4), the base (1) has an external diameter (D) which is larger than the diameter (F) of the packaging film (2), so that a packaging film (2) pushed onto the base (1) cannot slide over this end (4), but by means of an operator can be pulled off the base (1) by stretching the packaging film over the end (4) and can be filled through the base (1).
