Abstract (en)

[origin: WO9801605A1] The object of the invention is in particular to produce continuously a multiple thread viscose yarn, the filaments (10) emerging from a spinning device (3), passing through a drawing device and a drying device (13) and subsequently being wound up by a winding device (32) to form a spool (14). In order to achieve this object, the filaments (10) first pass through at least one swirling device (17) so that a swirling effect is caused therein.
