Abstract (en)
[origin: DE19601886C1] The invention concerns a steam line (1) designed to pass through a wall (2) in a steam power station, the steam line forming an anchorage point with the wall (2). A main valve (4) is connected directly to the line (1) at the anchorage point. Attached to the main-valve housing is at least one secondary valve (5 to 7). The invention calls for at least one additional valve (8, 9) to be mounted on the housing of a secondary valve (5 to 7) without any high-pressure piping between them and without any support.
