Abstract (en)
[origin: WO9818138A1] A microminiature planar signal transmission cable includes at least one support film having opposite first and second surfaces, and a thickness of less than about 0.003 inch. The cable further includes at least one layer of adhesive disposed on the first surface of the support film. The layer of adhesive preferably has a thickness of less than about 0.001 inch. At least one preformed signal transmission conductor having a widthwise dimension of less than about 0.002 inch is embedded within the layer of adhesive. A package for the signal transmission cable is further disclosed. The package has at least one layer of carrier film having a generally planar surface, and a layer of pressure sensitive adhesive disposed on the planar surface of the carrier film. The carrier film is adhesively affixed to the second surface of the support film of the transmission cable.
