Abstract (en)  
A cleaning apparatus is disclosed as including a body portion with a water entry end and holes in a fluid communicable relationship with each other via a set of internal water channels, and the water entry end is connectible to an external source of water, and water from the external source enters the body portion via the water entry end and exits therefrom via the holes end, and a liquid soap container is disposed within the body portion to connect and be in a fluid communicable relationship with the set of water channels, and liquid soap from said liquid soap container is adapted to be dispensed into the set of water channels while water from the external source passes through the set of water channels. <IMAGE>
