Abstract (en)

[origin: EP0875187A2] A device for presenting products comprises a frame (3, 4, 5) and at least one shelf (2) for supporting products, which is fitted thereto. The shelf (2) can be disposed at angle to slope down from the rear to the front, whilst the shelf comprises means for reducing the coefficient of friction of the upper surface of the shelf (2). As a result of this, the most widely varying products (B) will readily move forward when a front product is removed from the shelf (2). <IMAGE>
