Abstract (en)

A hanger is comprised of a one-piece body having a hook portion for the receipt of a display rod, a central portion depending from the hook portion, the body defining in the central portion a transverse opening therethrough fully bounded by the central portion, a fold line portion depending from the central portion and a flap segment depending from the fold line segment, the central portion the fold line portion and the flap segment jointly defining a slot in the body which opens into a margin of the body. A wallet displayed by the hanger has a first fold part disposed in the transverse opening and at least second and third parts extending from the fold part. The second part is disposed between hanger flap segment and the hanger central portion and the third part is disposed fully exteriorly of the hanger. A package for the wallet may be hangingly supported jointly with the wallet. The package defines a passage therethrough and the flap segment is resident in the package passage. The package is configured for containment of the wallet when the wallet and the package are removed from the hanger. <IMAGE>
