Abstract (en)
An infusion package comprising a pouch (5) of porous material that is gathered together at its neck (10) to contain an infusible substance (15), a string (20) that is attached to the neck, and a tag (25) that is attached to the free end of the string, the package being characterised in that when the string is wound around the neck of the pouch it remains wound by virtue of a yolk portion (30) in the tag that can receive the neck. <IMAGE>
