Abstract (en)
[origin: US5946833A] An ironing board with a front component which is foldable onto a rear component and with a support carrier for the front component, wherein the support carrier is longitudinally slideably arranged on the rear component and the front component can be moved forwardly beyond the rear component by a pivoting movement of the ironing board. The ironing board further includes a push arm which is connected in an articulated manner to the support carrier and the front component, wherein the hinge connection at the support carrier is located in the pull-out direction of the support carrier in front of the hinge connection at the front component.
