Abstract (en)

[origin: WO9640530A1] A method for making a luminescent duplicate by preparing a film including a luminescent material, preparing a transparent filter to form a cohesion interface between the luminescent material and an image-bearing surface and restrict the influence of the colour of the luminescent material on the rendition of the duplicate, and printing an image on at least one light-transparent surface so that said image is transparent. The printing surface may be the surface of the filter, of a transparent medium or of the luminescent material.
