Abstract (en)

[origin: WO9722614A1] A compound of formula (I) wherein R<1> and R<2> are each (CH<sub>2</sub>)<sub>m</sub>X, R<3> is H, each X is Cl or Br and m is 2 or 3, in combination with less than 0.5 % w/w of the corresponding compound wherein R<1> is (CH<sub>2</sub>)<sub>m</sub>H. Such compounds can be prepared by (i) the reaction of a Bronsted acid or a Lewis acid with NaBH<sub>4</sub> in an organic solvent, and (ii) adding the resultant solution to a solution of a corresponding compound wherein one of R<1> and R<2> is CO(CH<sub>2</sub>)<sub>n</sub>X and the other is CO(CH<sub>2</sub>)<sub>n</sub>X or (CH<sub>2</sub>)<sub>m</sub>X, wherein n = m-1. Such compounds can also be prepared, in optically-enriched form, starting from an optically-enriched trihaloiminophosphorane of the formula R\*N = Phal<sub>3</sub> wherein NR\* is a chiral moiety derivable from a chiral amine or chiral sulphonamide of the formula R\*NH<sub>2</sub>, which can be cyclisable with HO(CH<sub>2</sub>)<sub>3</sub>NHR.
