Abstract (en)

[origin: DE19545723A1] The invention relates to a process for the preparation of pourable granulated washing agent components which contain a soil-release polymer and a finely divided carrier. Said process should improve the incorporating capacity of the soil-release polymer substantially in that a dextrin-containing carrier substance is used. A combination of a soil-release polymer and a dextrin in the washing and cleansing agents eliminates the need for conventional co-builders of the polymer polycarboxylate type.
