Abstract (en)

[origin: EP0876788A2] The holder (1) includes a glass panel clamped between the U-sides (4,5) of the holder by an adjusting element generating clamping force. The bridge piece (13) of the holder, on its end surface (14) facing away from the U-sides has connections for detachably connecting it to the wall-holder (2) part of the profiled holder. The connections have bar-shaped protuberances (16) matching counter-profiled pieces (15) on the wall holder, and recesses (17). The bridge piece over part of its width and the U-arm over parts of its length, are hollow or solid, in the transition between the first U-arm and the bridge piece. The wall (29) facing the second U arm and next to the hollow or solid profile (28) has a threaded hole (30) for a screw (31) going through the second U arm.
