Abstract (en)
[origin: EP0876851A1] The device has a separator (2) and a slide surface (3) whose angle with respect to the horizontal is adjustable. The separator and slide surface carry the semiconductor material (1) to be classified. The material to be classified passes through the optical path (4) from a radiation source (5). A shape detection device (6) passes the shape of the material to a monitoring unit (7) which controls at least one deflection device (8).
