Abstract (en)
[origin: EP0876881A2] The pin (17), against which the striker (21) acts, has a second stop shoulder (19) at a distance from the first (18) in the direction of working action and pointing opposite the latter direction. The second stop shoulder interacts with a stop face (20) in axial communication with the guide tube (9) for the striker piston and pointing in the direction of working action. The distance between the two shoulders is greater than the distance between a stop for the selector fork and stop face in the tube.
