Abstract (en)
[origin: EP0877140A2] The frame has a lower frame support (10) having an arcing (11) on its outer side, as well as a leaf seal (13). The frame support also has a step-protection sole piece (12), whereby the leaf seal for the door rests on a badly insulated region of the step sole piece. The step sole piece is built so as to be insulated badly in the direction from the inside of the stop region to the frame support. The step sole piece is built from a multi-chamber hollow section and has side holders (15) at its ends having a profiling on their sides facing the support for connection to corresponding profiling on the supports.
