Abstract (en)

[origin: EP0877141A1] The seal (5) for the bottom of a door leaf is mounted on a support (6). A rail (7) is fixed to the leaf and there are two rods (8,8a) each articulated at one end on an upper spindle (9,9a) fixed to the rail and at the other end on a lower spindle (10,10a) fixed to the support. A movable part (11) is connected at one end to a return spring (17), supported on the rail, and at the other end to a strap (18) fixed to the door frame. Thus following displacement of the movable part the strap and the return spring control respectively the raising and lowering of the seal.
