Abstract (en)
[origin: EP0877212A2] The two arms (1,2) are connected firmly and/or releasably and at least partly run parallel to one another. One of the forward flow and back flow connections is shorter than the other. The individual arms are formed by a single conduit. The two arms are joined to one another by an external connecting piece (4). The connecting piece for production of a heating body connection (14,15) at an arbitrary selection separation point (13) is separable and/or removable.
