Abstract (en)

[origin: WO9726317A1] The invention relates to moulded bodies consisting of a washing or cleaning agent containing surfactants, which can be prepared by a process known per se. Said bodies demonstrate an excellent capacity to dissolve and disintegrate in water while at the same time having a good level of pressure stability when an amorphous sodium silicate with less than 15 % by weight of water, in a solid form, is added to the ingredients, in particular when they are prepared using microwave technology.
