Abstract (en)
[origin: WO9728329A1] An interior lining for the restoration of bathrooms comprises a floor unit (18), a ceiling unit as well as a plurality of walls constructed by pre-fabricated boards extending between said units. The shell is kept in place in the room by means of three sets of fastening profiles (7, 8, 9), located at different levels, applied on the inside of the walls of the room, <u>viz.</u> a lower profile set (7) placed close to the floor of the room, an upper profile set (8) placed at a distance below the ceiling of the room and an intermediate profile set (9) placed between said sets. The boards forming the walls of the shell consist of upper and lower part boards (15), the heights of which are determined by the level difference between the upper fastening profiles (8) and the intermediate profiles (9) and the level difference between the intermediate profiles (9) and the lower fastening profiles (7) respectively.
