Abstract (en)

[origin: WO9728340A1] The invention concerns a window (10), a door or the like with a fixed frame (12) and a wing frame (14) or wing supported to be pivoted via fitting system. It is proposed that the fixed frame (12) and/or the wing frame (14) consist of prefabricated angle brackets (16; 20) and straight frame struts (18, 22) connecting them. Functional fittings (34) are already arranged in or on the prefabricated angle brackets (16; 20) between the fixed frame (12) and the wing frame (14) or wing before the assembly of the angle brackets (16; 20) and frame struts (18; 22).
