Abstract (en)
[origin: EP0878582A1] The seals between the sections of the bridge deck (12) and the lateral pedestrian deck (14) are offset and parallel. The main seal (20) runs to a set depth and the outer ends are angled to form a short section (38) to which the secondary (pedestrian) seals (22) are bonded to form a waterproof connection. The main seals form a skirt over the edge of the bridge support and the seal construction allows relative movement between the main deck and the pedestrian deck without water entering the bridge structure.
