Abstract (en)

The system has each insulator fabricated in two parts (1a,1b) in mirror-image relationship, joined together by a strap (2) and closed by a clamp (3) formed integrally on one part for snapping over the end of the other part. Alternatively the closure may be held by a screw through collinear holes (4.1). Each part has a through hole (5) large enough for it to be fitted around a fence-post, with a concentric seal (19) for exclusion of moisture. The live wires or strips are guided and/or retained in grooves (6) also arranged in mirror-image relationship in the juxtaposed faces of the two parts.

Abstract (de)

Bei einem Isolatorsystem für stromführende Leiterdrähte und/oder -bänder für elektrische Weidezäune mit einem an einem Weidezaunpfosten (9) kraftschlüssig angeordneten Isolator (1), ist der Isolator (1) aus zwei, insbesondere formgleichen Isolatorhälften (1a und 1b) gebildet, die funktionskonform spiegelbildlich zueinander angeordnet und kraftschlüssig miteinander verbindbar sind. <IMAGE>
