Abstract (en)
[origin: DE19650806A1] The present invention pertains to an installation on an air pipe line distribution system (2), intended for an internal combustion engine and comprising an air intake duct connected downstream to an air inlet (16), said duct being fully integrated in a gas flow space (20) which supplies air from the air inlet (16) to the air outlet (18). The inventive air pipe line distribution system (2) is characterized in that an air filter in the form of a replaceable cartridge can be inserted therein, more precisely in the air intake duct (22).
