Abstract (en)
[origin: EP0879761A1] To manipulate cut sections of packing material, a variable suction holding force is applied to the material web (11) or cut section (10) near the suction conveyor or feed roller (19). A lower holding and suction force is used on a slow cycle or rotary speed, and a high force is applied to the web or section at higher speeds. An apparatus may be used where the cut section feed, and especially the feed roller with suction drillings (20), is connected to an underpressure source and especially a vacuum pump. The pump applies a variable suction force as required by the operating conditions.
