Abstract (en)

[origin: EP0880245A2] The messages contain position information and other information and are transmitted as new messages and as repeat messages with updated contents where required. At least the new messages are stored in the receiver and reproduced. A new message is stored after being received and is provided with a time stamp and a variable which can adopt at least two values. One value causes repeat messages arriving within a given time of the time stamp to not be stored or reproduced.
