Abstract (en)  
[origin: EP0880920A2] The core panel (2) is first coated with the covering panel (5) on the top side (3). At least one V-shaped groove is cut into the core panel to extend as far as the covering panel. The groove is parallel with the end sides (4) of the work surface and is positioned on the underside of the edge part of the end side being coated. The grooved edge part is folded round the lines of the groove tops while the groove flanks are folded together and stuck down.
