Abstract (en)  
[origin: EP0881318A2] The machine is used to finish a garment. It has cut-outs (6a,6b) for the suction (2) and blower (3) openings of the fan (1) at a gap from each other with a connecting channel (8) sliding between them. The connecting channel is structured at one end side to lie at the suction opening in a pressure seal fit to be laid at the suction opening. Its other end side is structured to lie at the suction cut-out (6a) in a pressure seal fit when the other side is at the suction opening (2). It is in a pressure seal fit at the blower cut-out (6b) when the other side is at the blower opening. A drive (9) moves the connecting channel between the suction and blower openings.
