Abstract (en)

[origin: EP0881330A2] The application of a direct or indirect coating of a paste or liquid medium, to one or both surfaces (4) of a moving web, uses a number of separate jets (12). They are spaced apart across the width (B) and/or length of the web surface (4) next to each other and/or in succession at a significant gap (D) from the web surface (4). The application fields of the jets at least partially overlap (U), so that the coating medium is spread over the whole width (B) of the web surface (4). Also claimed is an assembly with separate coating application jets (12) in two or more rows across the web surface (4) width and/or at an angle to it, with a gap between the rows along the web length line.
