Abstract (en)

[origin: WO9731511A1] The present invention provides a memory card connector in which attachment of an ejector member can be accomplished in a simple manner. The ejector member (50) used in the memory card connector (10) includes attachment structures (54) which are used to attach the ejector member to a frame (30) of the connector. Each of these mounting structures (54) includes a groove (55) and a recess (56) which communicates with the groove. A cantilever arm (58) is formed inside each recess (56). Cantilever arm (58) includes a surface (81). Claws (37), which extend from the frame (30), are accommodated inside the recesses (56). Afterward, when the ejector member (50) is caused to slide, the arms (58) bend so that the claws are guided by the surfaces (81) and introduced into the grooves (55).
