Abstract (en)

A rotatable connection between a vacuum cleaner hose (12) and a handle part (14), wherein the hose is connectable to a vacuum source (11) arranged in a vacuum cleaner housing (10). The rotatable connection permits limited turning motion of the handle part (14) relative to the hose (12), which is greater than 360 DEG . The rotatable connection is provided by an internally threaded nut on the handle part which cooperates with an externally threaded screw on the hose. The number of threads on the nut is greater than the number of threads on the screw. <IMAGE>
