Abstract (en)

[origin: EP0882641A2] An agricultural vehicle is described having a chassis 12 and a cab 10 mounted on the chassis 12. The fore end of the cab is mounted on the chassis for pivotal movement about a transverse axis but is prevented from moving relative to the chassis in a vertical plane. The aft end of the cab 10 is resiliently supported on the chassis by springs 14 and is connected to the chassis by means of a linkage, preferably a Watts linkage 20, 22, 24, that permits movement of the aft end of the cab 10 in a vertical direction towards and away from the chassis 12 while preventing transverse movement of the aft end of the cab. <IMAGE>
