Abstract (en)

The procedure, e.g. for assembling sections of a 4m x 3m poster in sets of eight, uses a rotary turntable (1) on which the sections (E1-E8) are placed in individual stacks. The turntable rotates with a stepped motion, halting as each stack reaches a counter (8) with a blade to separate and lift the sections one at a time from the top of each stack until a complete set of eight sections is formed. The resulting set of poster sections is then transferred to an output unit in readiness for dispatch.
