Abstract (en)

[origin: EP0882840A1] Device for mounting to a rail (4), so that means for screening off the railway can be connected to a number of spaced apart devices (1), said device comprising a connecting bar (2) extending almost horizontally during use of said device, in which the end (6) of said connecting bar can be slid under the rail (4) and is provided with a hook portion (22) that can embrace the rail foot (11) and with a lock (9) being operable by means of a coupling bar (12) extending towards the upright (3) across an angle with the connecting bar (2) and can be fixed to it (3) after the lock has been brought across the other side of the rail foot (11). The end pieces (6, 13) of the connecting bar (2) and of the coupling bar (12) are secured therein using bushes (7, 14) of electrically insulating material. <IMAGE>
