Abstract (en)

[origin: EP0883098A2] An apparatus for transmitting and receiving encoded signals, particularly for remote control, comprising at least one transmitter (2) and at least one receiver (4), characterised in that: the transmitter (2) comprises a transmitting section (6), a microcontroller (14), a memory (12) with at least one resident code, means (10) for setting the receiver (4) to receive said code, and at least one key (8) associated with each code to transmit a correspondingly encoded control signal to said receiver (4), and the receiver (4) comprises a receiving section (16), a microcontroller (24), and a memory (18) in which the codes of transmitters scheduled to dialogue with said transmitter (2) can be memorized. <IMAGE>
