Abstract (en)
[origin: DE19606887A1] A paper turner has an acceptance compartment (100) rotating about an axis (200) for the items (102) to be turned in which said items (102) are arranged in such a way that their axes of inertia when being turned substantially corresponds to the axis of rotation (200) of the acceptance compartment (100), a device (104) to insert the items (102) into the acceptance compartment (100) in the direction of the axis of rotation (200) and a device (106) to remove said items (102) from the acceptance compartment (100) towards the axis of rotation (200). The insertion device (104) is arranged at an adjustable distance upstream of the acceptance compartment (100) in the transport direction. The removal device (106) is at a fixed distance downstream of the acceptance compartment (100) in the transport direction.
