Abstract (en)
[origin: WO9732068A1] Particulate additive is included within an MMV fibrous web by forming a cloud of MMV fibres by fiberising a vitreous melt using at least one centrifugal fiberising rotor, carrying the cloud of fibres by an air stream to a permeable collector, blasting the particulate additive into the cloud at a direction against the direction of travel of the cloud, and collecting the fibres and additive as a web on the collector.
