Abstract (en)
[origin: WO9732408A1] A two way selective call receiver (1) comprising a combined transmitter and receiver circuit (2), for receiving a coded transmitted message, and a processor (3) for determining if the message is a preview message of a longer message. The selective call receiver (1) also comprises a memory (4), display (5) and keypad (6). Upon receipt of a signal from the keypad (6), the processor (3) provides an encoded request signal to transmitter and receiver circuit. The request signal is used to request, from an information system, the longer message associated with the preview message.
