Abstract (en)

[origin: EP0884362A1] A polyoxymethylene composition is provided, which is reduced in malfunctions caused by the formic acid formed from the composition, such as staining caused by bleeding from rubber or corrosion of a metallic magnetic substance. It comprises polyoxymethylene and (a) 0.01 to 3% by weight of a sterically hindered phenolic antioxidant, (b) 0.001 to 0.3% by weight of a polyamide, and (c) 0.001 to 0.5% by weight of magnesium oxide having a specific surface area of at least 10 m<sup>2</sup>/g, each percentage being based on the polyoxymethylene.
