Abstract (en)
[origin: EP0884419A1] The vertical supports (1) on their two sides have guide channels (10) for blocking-up plates (8,9). The supports on their facing insides each have a guide channel (7) for guiding brace frames (3). Each guide channel is accessible via a gap (23) formed by two flanges (22). On both sides of the guide channel are roller tracks (2), against which the rollers (12) of the brace frame support. At least one brace frame is arranged between two supports of a support pair. The brace frame on both sides facing the supports has rollers rotating around two spaced apart shafts (11).
