Abstract (en)

The door is formed with two sheets (2,2') which can be made of different materials such as wood, plastic, metal and so on, and a core (3). There are no separate mouldings for fixing the glass. Instead the mouldings (5) form a part of the sheets (2,2'). The replacement and introduction of the glass (4) can be made from the superior, inferior or corner sides. The central area of the core (3) is provided with a cut out part which opens laterally to one of the top, bottom or side edges of the door (1). That lateral opening can be blocked by a separate piece (6), which after insertion of the glass pane holds the pane inside the door. <IMAGE>
