Abstract (en)
[origin: DE19608729C1] An electromagnetic switching device comprising an armature (10) provided with an armature plate (11) at one end of a plunger core portion (9), and with one winding (6) wound around a bobbin (8). Inner (15) and outer (21) yokes are provided, with the inner yoke (15) designed in such a way that it lies opposite the other end of the plunger core portion (9) and is positioned adjacent and normal to it, and a magnetic cylinder (19) having an axial length considerably greater than the width of the inner yoke (15) at that part, which faces towards this other end of the plunger core portion (9), and with the cylinder (19) inserted into an axially extending opening (7) of the bobbin (8).
