Abstract (en)

[origin: EP0885690A2] Releaseable mechanism for a power tool includes first (2) and second (12) members which may be coupled together in selective orientations. The coupling of the members (2) (12) is achieved without the need for separate tools by way of co-operation between manually operable detent (24) and at least one locking member (18). The advantage provided by this arrangement is that the need for separate coupling tools is obviated. <IMAGE>
