Abstract (en)

The method comprises placing the weighed quantity of fruit (3) or the like inside the tubular net component (2), in the vicinity of one end of the rigid tube (1), then carrying out transverse clamping of the net tube after the fruit has been loaded, forming a contraction (7) which is then grasped by support means which are adjacent to the lateral surface of the rigid tube, with subsequent immediate release of the transverse clamping device for the net tube, and commencement of displacement of the support means which convey the bag which has just been filled, to the other end of the rigid tube, and which bag is welded and cut when it emerges from the tube. <IMAGE>
