Abstract (en)
[origin: EP0885817A1] The invention is relating to a distributor for piece goods having an order device (1) and compartments (3), wherein said piece goods can be arranged in such a way that the same goods are contained in the same compartment (3), and transporting means (4) cooperating with said order device being provided for enabling to move a specific piece good from the corresponding compartment (3) to a delivery window (6), a display unit (1b), an input unit (1a) and a processing unit which enables (a) to display, in the form of a list or an image on the screen (1b') of the display unit (1b), at least a part of the available goods in said compartments (3), (b) to make a selection among these displayed available goods, (c) to display separately these selected goods on the above mentioned screen (1b') or on a separate screen of said display unit and (d) to conduct said selected goods to the delivery window (6) when acting on the order device (1). <IMAGE>
