Abstract (en)

[origin: EP0886017A2] The crosspiece (11) of a roof ridge section retainer has weak points defining two bending lines (18,19). The bending lines are spaced apart and run transverse to the longitudinal direction of the crosspiece. The bending lines are positioned between first (12) and second fastening strips which are fastened opposite sides of the crosspiece and run transverse to the planes of the strips. Preferably, the fastening strips have a number of weak points, formed by rows of holes (24,25) which define bending folding lines.
