Abstract (en)
[origin: EP0886022A2] A rosette (2) is inserted from outside into the cylindrical hole in a door-leaf (1) and as a ring holding the stop-bolt (4) of a bayonet fastening. The rotary flange (5) of the outer lock part has bayonet slits fixing it in position. The inner lock part carries a bolt or catch (16) and is connected by coupling pins (18,19) to the outer lock part. The rotary flange has a sprung locking pin fitting into a hole in the rosette after the bayonet fastening has locked and preventing the outer lock part from detaching. The inner lock part's catch is released by an emergency release knob (17) with shaft and sloping control surface.
