Abstract (en)

The door comprises at least one rigid or pliable panel (2) and a housing (3) containing a drive and control system (25-28) and a guide (36) which extends on either side of the doorway. The housing extends across the whole width of the doorway and has an outer covering, especially of natural or imitation wood, to give it the appearance of a lintel. The whole or part of the doorway opening has a frame or lintel (5) which can be a hollow structure containing a thermal insulation material, e.g. an expanded cellular material, with grooves or channels for electrical cables, seals, radar or optical equipment which prevents the door from closing when someone is in the doorway.
